GENTLE READER,

TO make an *ALMANAC* is not so easy a matter as some people think—like a well furnished table, it requires to have a variety of dishes to suit every palate, besides considerable skill in the cooking—Now, as it is impossible to suit all the dishes to every particular taste, we hope you will not be offended, should you find any not entirely to your liking, as we are certain there are a great many which will suit you to a hair. We are persuaded you will not only be entertained but instructed by our *Almanac*, for we have ransacked all the repositories of learning to cull a few flowers for your amusement. Moreover, Kind Reader, as we believe you would think the better of a man for having a decent coat on his back, so we have exerted ourselves to make our *Almanac* appear in a more respectable dress, than some other *Almanac* mongers have done, who, it would seem, have thought their *Almanacs* not worthy a good coat.

But there is one dish we invite you to partake of, and we are prouder of it than of all the rest put together; and to whom do you think are we indebted for this part of our entertainment? Why, to a *Black Man*—Strange! Is a *Black* capable of composing an *Almanac*? Indeed, it is no less strange than true; and a clever, wise long-headed *Black* he is: It would be telling some whites if they had made as much use of their great school learning, as this sage philosopher has made of the little teaching he has got.

The labours of the justly celebrated *Banneker* will likewise furnish you with a very important lesson, courteous reader, which you will not find in any other *Almanac*, namely that the *Maker* of the *Universe* is no respecter of colours; that the colour of the skin is no ways connected with strength of mind or intellectual powers; that although the *God* of *Nature* has marked the face of the *African* with a darker shade than his brethren, he has given him a soul equally capable of refinement. To the untutored *Blacks* the following elegant lines of *GRAY* may be applied.

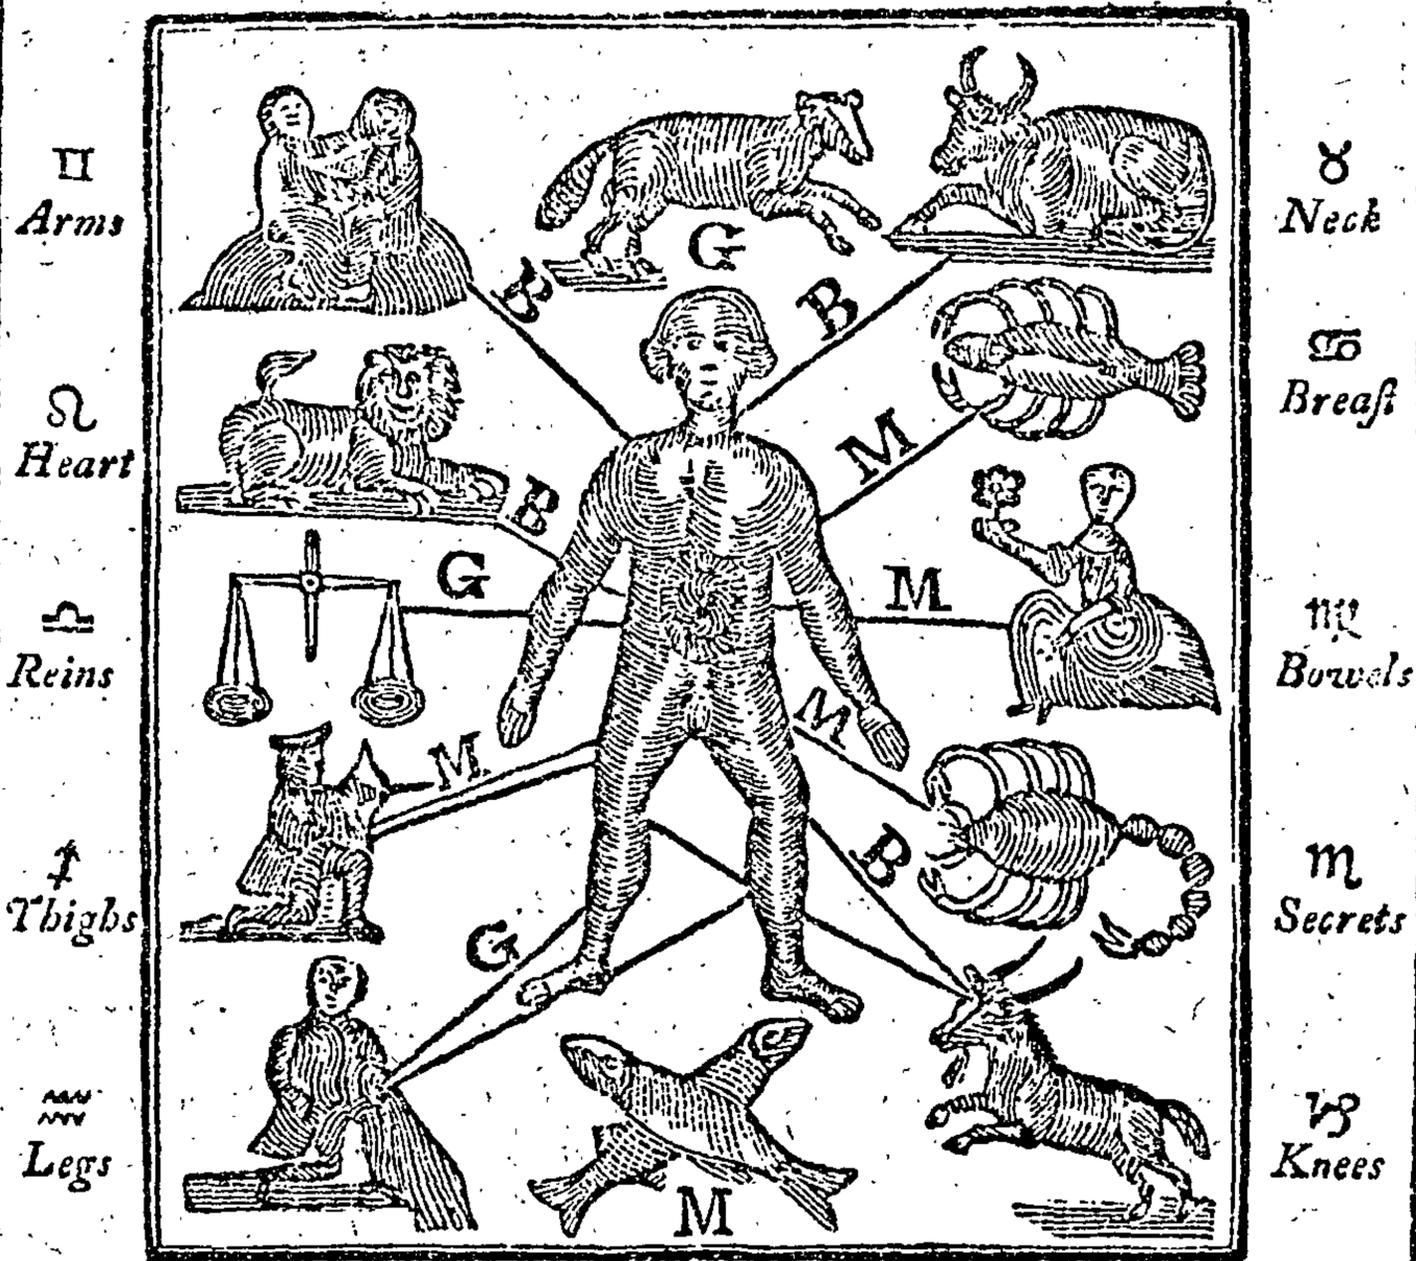

“ Full many a gem of purest ray serene,
“ The dark unfathom'd caves of ocean bear:
“ Full many a flower is borne to blush unseen,
“ And waste its fragrance on the desert air.”

Nor you ye proud, impute to these the blame
If *Afric's* sons to genius are unknown,
For *Banneker* has prov'd they may acquire a name
As bright, as lasting as your own.

X 5 795 B 22 A

The ANATOMY of MAN'S BODY, as governed by the
Twelve Constellations.

♈ The Head and Face.

♋ The Feet.

To find where the sign is.

First find the Day of the Month, and against the Day
you have the Sign or Place of the Moon in the 6th Co-
lumn. Then finding the sign there, it shews the Part
of the body it governs.

MAN'S head and face Heaven's ram obey,
His neck the neck-strong bull does sway,
The arm-twinning twins guides hands and arms;
Breasts, sides and stomach Cancer charms,
The lion rules his back and heart,
Bowels and belly's Virgo's part;
Reins, haunches, navel, Libra tends,
Bladder and Secrets Scorpio, befriends:
The half-hors'd bowman rules the thighs,
And to the kid our knees suffice;
Our legs are but the butler's fees;
The fish our footsteps oversees.

**Common Notes and Moveable Feasts, for the
YEAR 1796.**

<i>Dominical Letters</i>	C B	<i>Easter Sunday,</i>	March	27
<i>Cycle of the Sun</i>	13	<i>Ascension Day</i>	May	5

**Three Eclipses of the SUN, and one of the MOON,
for the Year 1796.**

First, of the Sun, January 10th. invisible in the United States, ☿ at 1h. 15m. A. M. ☉ is 5 digits eclipsed on the meridian in long. 161. 15 east from the meridian of Baltimore, in or near the torrid zone.

Second, of the Sun, July 4th. invisible in the United States, ☿ at 6h. 8m. P. M. ☉ is centrally and totally eclipsed (the Moon's semidiameter being greater than that of the Sun) on the meridian at 6h. 16m. in long. 92 west, from the meridian of Baltimore, and lat. 40 north.

Third, of the Moon, December 14th. at 20 min. past 9 o'clock in the morning, invisible in this part of the globe.

Fourth, of the Sun, December 29th. invisible in the United States, ☿ at 1h. 3m. A. M. ☉ is centrally eclipsed on the meridian at 11h. 39m. in long. 164. 15 east from the meridian of Baltimore, and lat. 18 48 south.

Postage of Letters throughout the U. STATES.

For the postage of any single letter to or from any place by land, not exceeding 30 miles, 6 cents; over 30, to 60, 8 cents; over 60, to 100, 10 cents; over 100, to 150, 12½ cents; over 150, to 200, 15 cents; over 200, to 250, 17 cents; over 250, to 350, 20 cents; over 350, to 450, 22 cents; and from every place more than 450 miles, 25 cents.

1st Month, JANUARY, hath 31 Days.

EXPLANATION—If you want to know the interest of Fifty Pounds you will find that for a month it is five shillings; for three months fifteen shillings; for six months one pound ten shillings, &c.

Situation, extent, and boundaries of the United States,

} Between { 31° and 49° N. lat.
9 E. and 24 W. lon.
from Philadelphia.

Being about 1250 miles in length; 1030 miles in breadth.

BOUNDED agreeably to the limits established by the definitive treaty of peace between the United States and Great-Britain, ratified on the third day of September, 1783.

} On the northwest and north, by the high lands which lie to the eastward of the river St. Lawrence, and which divide the rivers that fall into the St. Lawrence from those that fall into the Atlantic Ocean; by Upper Canada, the river Iroquois or Cataraquy; the Lakes, viz. Lake Ontario, Lake Erie, Lake Superior, the Long Lake, the Lake of the Woods; and a line drawn due west from the northwestmost angle of the last mentioned Lake to the river Mississippi; on the west by the river Mississippi; on the south by West-Florida, East-Florida, and St. Mary's river; on the east by the Atlantic Ocean, the river St. Croix, and Nova-Scotia; comprehending all islands within twenty leagues of the coast.

The late geographer of the United States, Mr. Hutchins, has computed that the surface contained within the above boundaries is one million of square miles; which amounts to 640,000,000 of acres. Of this, agreeable to his computation, 51,000,000 of acres are water. So that the land within the United States amounts to 589,000,000 of acres. About three fifths of which is comprised within the states that now compose the union. The remainder, to wit. 220,000,000 of acres, lying west of the northern and middle states, and northwest of the river Ohio, and extending to the river Mississippi, together with an extensive territory south of the Ohio, originally ceded to the United States, by North Carolina, South-Carolina, and Georgia, forms what is usually denominated the Western Territory.

A great proportion of this territory is yet claimed and occupied by the aboriginal natives. That part of it which is already purchased of them by the government of the United States (as also that which is still unpurchased, so far as the title of the present possessors may be hereafter extinguished) is appropriated as a sinking fund for the relief of the principal of the national debt.

Table of the Federal Money of Account, as established by Congress.

10 Mills make	1 Cent
10 Cents	1 Dime
10 Dimes	1 Federal Dollar
10 Dollars	1 Eagle.

A N E D O T E S.

A PARSON standing once in need of a new wig, his old one defying all farther assistance of art; he went over to Canterbury, and applied to a barber young in business, to make him one. The tradesman, who was just going to dinner, begged the honour of his new customer's company to his meal; to which the parson most readily consented. After dinner a large bowl of punch was produced, and the reverend guest, with equal readiness, joined in its demolition; when it was out, the barber was proceeding to business, and began to handle his measure—when the parson desired him to desist, saying he should not make his wig. “Why not,” exclaimed the astonished shaver, “Have I done any thing to offend you, Sir?” Not in the least, replied the parson; but I find you are a very honest, good natured fellow; so I will take some body else in—had you made it, you never would have been paid.

REMARKABLE INSTANCE OF SAGACITY IN AN ELEPHANT.

MANY surprising anecdotes have been related of that half-reasoning animal the elephant; but the following is so extraordinary a fact, that had it not occurred in the presence of a numerous body of men, some doubts might arise in the mind of the reader, respecting the credibility of the narration. Among the elephants that went round to Madras with troops in the year 1781, under the command of the late colonel Pearse, there was one whose keeper had been, at times, particularly neglectful of him; and who had frequently pilfered from his grain, on the line of march. Upon every such occasion the elephant discovered evident signs of anger and resentment, as if he was neither insensible to the negligence, nor ignorant of the mal-practices of his keeper. But as the noble minded animal continued but to threaten, the fellow became less and less mindful of him, till at length he wholly disregarded the frequency of his threats. One morning the cattle, &c. were ordered to be mustered for review, and when the commanding officer, in going along the line, passed in front of the elephant, the animal roared out, as if it should seem to attract his attention; for when he perceived that the eye of the colonel was directed towards him, he immediately laid hold of his keeper with his proboscis, put him under his feet, and crushed him to death; then fell upon his knees, and solicited the colonel for pardon. The singularity of this act induced colonel Pearse to make an immediate enquiry respecting it, when he learnt that the elephant had been forced, contrary to his natural disposition, to inflict this punishment on his keeper, for the incorrigible neglect he was prone to commit, and the frauds he had so long practised on his daily allowance.

AN EXTEMPORE SERMON,

Preached at the Request of two Scholars, by a Lover of Ale,
out of a hollow Tree.

BELOVED,

LET me crave your attention; for I am a little man, come
at a short warning, to preach a brief sermon upon a
small subject, to a thin congregation, in an unworthy pulpit.
And now, beloved, my text is MALT, which I cannot divide
into sentences, because it is none; nor into words, it being
but one; nor into syllables, because upon the whole matter,
it is but a monosyllable. Therefore I must, as necessity
enforces me, divide it into letters; which I find in my text,
to be only these four—M, A, L, T, malt.

M, my beloved, is moral, L, is literal, and

A, is allegorical, T is theological.

The moral is well set forth, to teach you drunkards good
manners; therefore,

M, my masters

L, listen

A, all of you,

T, to my text:

The allegorical is, where one thing is spoken, and another
thing is meant. Now the thing spoken of is bare MALT,
but the thing meant, is STRONG BEER, which you rusticke
make,

M, meat,

L, liberty,

A, apparel

T, treasure.

The literal is, according to the letter.

M, much

L, little

A, ale,

T, thrift.

Much ale, little thrift.

The theological, is according to the effects which it works,
which I find in my text to be of two kinds. 1. In this world.
2. In the world to come. In this world the effects which
it works, are

in some, M, murder,

in some, L, looseness of life,

in others, A, adultery,

in others, T, treason,

In the world to come,

in some, M, misery,

in some, L, languishing,

in others, A, anguish

in others, T, torment.

Wherefore my first use shall be exhortation.

M, my masters

L, leave

A, all of you,

T, tipling.

Or else, 2dly. by way of threatening,

M, my masters,

L, look for

A, all of you,

T, torment.

So much for this time and text; only by way of caution
take this.—A drunkard is an annoyance to modesty—the
trouble of civility—the spoil of wealth—the destruction of
reason—the beggar's companion—the constable's trouble—
his wives woe—his children's sorrow—his neighbour's scoff—
his country's disgrace—his own shame—a walking SWILL
TUB—the picture of a beast, and the monster of a man,

RULES OF DIET AND EXERCISE.

BY DR. SUTHERLAND.

OF ALIMENT.

1. **W**HEN we take in a larger quantity of aliment than our digestive faculties are able to assimilate into chyle, such never can turn to good nourishment.
2. Food highly saturated with salts and oils, corrupts the blood.
3. People of gross habits, and feverish disorders, should eat sparingly.
4. Unseasonable abstinence has also bad consequences; for without a supply of fresh chyle, animal juices acquire a putrescency. Weakness proceeding from want of due nourishment, produce fevers of the worst sort, as those who fast too religiously, feel to their cost.
5. The weak, emaciated, hectic, or consumptive, ought to observe the strictest regimen. To such, excess in things the most innocent is perilous.
6. Nature abhors discordant mixtures, fish, flesh, wine, beer, cyder, cream, and fruit. These distend the bowels with wind, and prevent digestion.
7. Bread made of the purest flour of wheat, nourishes much, and binds the belly. Mixed with bran it is opening, and nourishes less. Wheat bread, properly fermented and well baked, is the most valuable part of diet.
8. Milk is already elaborated, prepared and digested in the body of the animal. It is an extract of animal and vegetable food. It is replete with nutritious juices, and wants little else than the colour, to be blood. Where feverish heat predominates, in costive habits especially, buttermilk and brown bread, are truly specifics.
9. Sea salt, moderately used, is very wholesome; to excess, the reverse.
- The flesh of animals in their prime of life, of such as are castrated, and not used to hard labour, is best.
- The flesh of granivorous birds is not so oily as that of water fowls. Mutton is the best of all flesh for the delicate. Beef and pork are proper only for the strong, and those who use hard exercise.
10. Pond fish, or such as are fat, are hard of digestion. Such as are caught near the sea-shore are lighter. Boiled fish is lighter than roasted.
11. Bitters bind the belly. Acids gripe the bowels. Salted things promote stool and urine. Sweet things breed phlegm.
12. Onions, leeks, radishes, and all the alcalescents, are antiseptic. Mustard, and cresses, occasion a difficulty of urine. Cellery is diuretic. Aromatics heat. Colworts and lettuce cool. Cucumbers are cold, crude, and hard to digest. Ripe fruits open the belly; unripe, bind. Pulses of all sorts are windy. Honey promotes urine and stools, but gripes;

many. Soft bread increases acidity in stomachs troubled with heart burns, biscuit, less. Confections and dainties tempt people to eat too much, and are hard of digestion.

13. By statical experiments, the Sanctorians have discovered that the body perspires but little while the stomach is too full or too empty. That full diet is prejudicial to those who use little exercise, but indispensibly necessary to those who labour much. That food, the weight of which is not felt in the stomach, nourishes best and perspires most freely. That he who goes to bed without supper, being hungry, will perspire but little; and if he does so often, will be apt to fall into a fever. That the flesh of young animals, good mutton, and bread well baked, are the best food. That the body feels heavier after four ounces of strong food that nourishes much, such as pork, eel, salt fish or flesh, than after six ounces of food that nourishes little, such as fresh fish, chicken, and small birds; for where the digestion is difficult, the perspiration is slow. That unusual fasting, frequently repeated, brings on a bad state of health. That the body is more uneasy and heavy after six pounds taken in at one meal, than after eight taken at three. That he destroys himself slowly, who makes but one meal a day, let him eat much or little. That he who eats more than he can digest, is nourished less than he ought to be, and so becomes emaciated. That to eat immoderately after immoderate exercise of body or mind, is bad: for a body fatigued perspires but little.

14. Wine cyder, perry, and all fermented liquors, are antiseptic. When beer neither oppresses the stomach, nor binds the belly, but passes by urine, it may be allowed. Where it generates wind, passes sluggishly, or breeds stony concretions, it ought not.

Wine drank too freely weakens the man, as may be seen by his action. Sweet wines promote stools, but they excite flatulency and thirst; they promote expectoration, but impede urine. Tawny austere wines are good when the body is loose, provided there be no disorder in the head, no impediment in spitting or making water. Pure wine is best for the stomach and bowels; diluted with water it is best for the head, breast, and urinary passages. Strong Spanish or Hungarian wines, strengthen the stomach wonderfully.

15. Mineral waters are possessed of a spirit which helps digestion, and promotes sleep. Patients require but little pure wine while they drink waters. Heetics ought to drink none. Mineral waters are all hard, and therefore unfit for domestic purposes, until they are robbed of their acid by boiling. Injudicious therefore, is the practice of those who recommend bath waters at meals. People of lax bowels may drink them none other. Pure soft water is the best of all diluents, especially to those who are naturally collicive. Those who are troubled with stomach complaints, ought to drink wine, or rather rum, or brandy. The latter are only lowered with water, the former is composed of we know not what.

16. Tea drinking might produce many salutary effects, were the custom confined to people of rigid fibres and active lives. The penetrating quality of the fluid, added to the saponaceous antiseptic property of the sugar, would render the infusion miscible with the blood; obstructions might be removed, acrid salts diluted, viscid phlegm dissolved; the astringency of the plant might answer the good purpose of passing off the liquor more quickly; the sanguinary, the bilious, the phlegmatic, and the melancholic, might all find relief; fevers might be prevented in the young, and aches and obstructions in the old, the belly might be kept soluble, the urinary passages cleansed, and insensible perspiration, the healthiest of all secretions, might be promoted.

But such is the force of example, the lazy, the indolent, the effeminate, men as well as women, of weak nerves, relaxed fibres, and foul juices, indulge themselves twice or thrice a day in the immoderate use of a tippie, which inervates more and more.

OF EXERCISE.

1. In general that sort of exercise is best, to which one has been accustomed, which best agrees, and in which people take delight.

2. Exercise is best when the stomach is most empty. When the patient begins to sweat, grow weary, or short-breathed, he should forbear till he recovers. For the delicate and infirm, that sort of exercise is most proper which is performed by external help, gestation in wheel carriages, horse-litters, sedan chairs, sailing, &c.

3. For such as are neither robust nor very tender, that sort of exercise is best which is performed partly by ourselves, partly by foreign assistance. Of this sort riding on horse-back is the foremost.

4. After exercise every man ought to rest before he sits down to dinner. Cold small liquors after exercise, are pernicious.

A REVEALED KNOWLEDGE of the PROPHECIES and TIMES.

BY RICHARD BROTHERS.

THE vision of Daniel, chap. 7, of the *four great beasts*, alludes to the present time of the world. The first was like the LION, with eagle's wings, and means George the Third, King of England. Plucking the wings, means taking away the power of the King. Standing on the feet, as a man, with a man's heart, means his reduction to the condition of other men, and possessing similar thoughts.

St. John, in the 19th chapter of Revelations, from verse 20 to 21, alludes to this prophecy of Daniel's, and to the ruinous consequences of the present war to many nations and persons. The second beast was like the BEAR, with

three ribs between its teeth; and they said thus to it, *arise devour all flesh*. This means the present Empress of Russia: According to the judgment of God she is decreed to suffer death by the hands of man. The third beast was like the LEOPARD, with four heads, and four wings of a fowl upon its back. This beast means Louis XVI. King of France. The fall and death of this monarch, to fulfill the judgment of God, by his prophet was impossible for all the armies of Europe to prevent. The fourth beast, with ten horns and iron teeth, which was dreadful and terrible, and strong exceedingly, means the Emperor of Germany. The ten horns means the Electors or Princes of the empire. In one part of this chapter, the horns are called Kings, because the electors raise armies, go to war, and rule with absolute power. They are represented as horns from their being the defence of the Emperor's head. This beast devouring, breaking in pieces, and stamping on the residue with its feet, means the entire destruction of the German Electors, and the possession of their territories by the Emperor. He will destroy them, and spread his dominion over Italy, threatening all Europe, and dispersing its Kings. Rome and Venice will fall under his power, but the former will be retaken by the French republic; the latter will be plundered, and almost destroyed.

He will make peace with the French, notwithstanding the remonstrances of the English, whose army will be surrounded and disarmed. He will then reduce all Germany, beginning with Hanover, and plundering it quite bare.

After this the Emperor will suffer death by the hands of man.

FRIENDS GENERAL MEETINGS are kept,
AT Philadelphia, the fourth Firstday in the third and ninth month; at Wilmington, the next Firstday after the spring meeting in Philadelphia; at Chester River, the third Seventhday in the fourth month; at Duck Creek, the fourth Seventhday in the fourth month; at Salem, the third Firstday in the fifth month; at Flushing the last Firstday in the fifth month; at Little Egg Harbour, the first Firstday in the sixth month; at Curles and Black Water, in Virginia, alternately, the third Seventhday in the fifth month; at Baltimore, the second Firstday in the tenth month; at Newport, Rhode-Island, the second Sixthday in the sixth month; at Little-Creek the fourth Seventhday in the tenth month; at Shrewsbury the fourth Firstday in the tenth month; at Cæcil, the third Seventhday in the tenth month; at Matinecock, on Long Island, the last Firstday in the tenth month; at the Old Neck, in Perquimans, North-Carolina, the fourth Sixthday in the tenth month.

GOVERNMENT OF THE UNITED STATES.

GEORGE WASHINGTON, President, and Commander in Chief; salary 25,000 dollars.

John Adams, Vice-President, and President of the Senate; salary 5000 dollars.

Frederick Augustus Muhlenberg, Speaker of the House of Representatives.

John Rutledge, Chief Justice, salary 4000 dollars.

William Cushing, of Massachusetts,	} Associate Justices, salary 3500 dollars each.
James Wilson, of Pennsylvania,	
John Blair, of Virginia,	
James Iredell, of North-Carolina,	
William Paterson, of New-Jersey.	

Secretary of State.

Secretary of the Treasury.

Timothy Pickering, Secretary at War.
